

サンプル文書

あなたの名前

2026 年 9 月 30 日

これはサンプル文書です。文献を参照します。Ia 型超新星
作用は、

$$S = \int d^4x \sqrt{-g} \left[\frac{1}{2\kappa} R + \mathcal{L}_M \right] \quad (0.1)$$

で与えられる。計量の逆数の変分 $\delta g^{\mu\nu}$ を計算すると、

$$\delta S = \int d^4x \delta g^{\mu\nu} \left[\frac{1}{2\kappa} \frac{\delta(\sqrt{-g}R)}{\delta g^{\mu\nu}} + \frac{\delta(\sqrt{-g}\mathcal{L}_M)}{\delta g^{\mu\nu}} \right] \quad (0.2)$$

$$= \int d^4x \delta g^{\mu\nu} \left[\frac{1}{2\kappa} \left(\frac{\delta R}{\delta g^{\mu\nu}} + \frac{R}{\sqrt{-g}} \frac{\delta\sqrt{-g}}{\delta g^{\mu\nu}} \right) + \frac{1}{\sqrt{-g}} \frac{\delta(\sqrt{-g}\mathcal{L}_M)}{\delta g^{\mu\nu}} \right] \quad (0.3)$$

$$\frac{d}{dt} \left(\frac{\partial L}{\partial \dot{q}_i} \right) - \frac{\partial L}{\partial q_i} = 0 \quad (0.4)$$
